

Which do you pet? Which do you eat?

Why?

- ♥ Just like the dog you love and cherish as part of your family, pigs are curious, playful, funny and insightful animals.
- ♥ They are thought to have intelligence beyond that of an average 3-year old human child. They are actually smarter than dogs and every bit as friendly, loyal, and affectionate!
- ♥ When in their natural surroundings, not on factory farms, pigs are social, protective animals who bond with each other, make beds, relax in the sun, and love to roll around and cool off in the mud.

Pigs in factory farms suffer unbearable conditions. Piglets are taken away from their mothers at a tiny age, subjected to mutilations without anesthesia and then crowded into bare, strawless sheds full of dust, noxious gases and faeces, to exist in painful confinement until finally being brutally slaughtered for their flesh.
